SUMMARY

Computer Science graduate with internship experience in IT support, software development, automation, and web technology. Skilled in troubleshooting technical issues, supporting business systems, working with hardware and software, and building practical solutions using Python, JavaScript, Docker, PostgreSQL, and Jira.

EDUCATION

B.S. Computer Science | Minor in General Business | Bowling Green State University May 2026

GPA: 3.9 | Dean's List | Academic Scholarship | Team Captain, Intramural Basketball & Volleyball

WORK EXPERIENCE

Application Development | Velocity Technologies Inc. | Toledo, OH Summer 2025 - Current

- Developed client-facing AI tools and automation pipelines using n8n, OpenAI, vector databases, and PostgreSQL
- Managed multiple client-facing projects simultaneously, including AI automation workflows, a context-aware email tool, and Shopify storefront optimization
- Coordinated with clients, internal team members, and third-party vendors to gather requirements, implement changes, and resolve issues
- Tested and validated updates in development environments before deploying production-ready changes, contributing to an average 20% improvement in Shopify page speed scores

Engineering & IT Helpdesk Intern | Teijin Automotive Technologies | Carey, OH Summers 2022 to 2024

- Delivered IT support in a fast-paced manufacturing environment, troubleshooting hardware, software, network, and printer issues across plant operations
- Assisted with workstation setup, cabling, and switch configuration on enterprise networking infrastructure

PROJECTS

Name That Tune | Python, Flask, WebSockets, Docker, Cloudflare, Spotify API

- Built a real-time multiplayer music guessing game with a TV host screen and multiple simultaneous player devices, featuring buzz-to-pause playback control with sub-second latency
- Integrated Spotify Web API with OAuth 2.0 for real-time playback control, secure user authentication, rate limiting, and session-based access control
- Deployed the application with Docker on a self-hosted Linux server and used Cloudflare Tunnel to securely route public traffic without opening inbound ports

AI-Powered Email Automation | n8n, Python, TypeScript, PostgreSQL, OpenAI

- Built the full automation pipeline from prompt design to email delivery, including logic for formatting thread history, managing project context, and preparing AI-generated responses for review
- Designed the PostgreSQL vector knowledge base structure and retrieval process to improve semantic matching when client questions were vague, incomplete, or underspecified

Shopify Storefront Optimization | JavaScript, Liquid, CSS, HTML, Shopify CLI

- Led performance optimization work for a production Shopify storefront, identifying bottlenecks across high-traffic product and landing pages
- Used Lighthouse and Chrome DevTools to identify render-blocking resources, unused JavaScript, and unoptimized assets
- Achieved an average 20% improvement in web performance scores across key pages, improving Time to Interactive on both mobile and desktop

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, C++, SQL, HTML, CSS, Liquid

Tools & Platforms: GitHub, n8n, Docker, Shopify, Jira, Confluence, Xcode, Android Studio, VS Code

AI & Automation: LLM workflows, OpenAI API, prompt engineering, vector databases, RAG

Concepts: OOP, Data Structures, Algorithms, REST APIs, WebSockets, OAuth 2.0, Networking (IP/TCP)
